SOUND ABATEMENT

Action Target offers a variety of sound abatement fascia options that make the range more comfortable for users and give it a clean, finished look. These materials are available in a number of thicknesses and colors. Engineered to the exact requirement and specification of your range, all our work is guaranteed to meet all OSHA, government, military, and civilian noise standards, regulations, and ordinances. Custom options are available upon request.

Shooting Range Sound Test

Action Target conducted a test on Friday April 18, 2008 to determine the level of sound emitting from an insulated indoor range.

The test was conducted from five positions outside the range and readings at the shooting line in the range. At each distance three measurements were taken; ambient sound, traffic, and peak levels with shots fired in the range. The results are as follows:

Distance	Ambient db	Traffic db	Shot Fired db
In the range	79	--	107
In the Gun store	64	68	72
10' south	61	68	67
50' east	56	63	61
State St. sidewalk	53	64	54
200' north	54	63	55

The readings from 50' east and 10' south increased slightly from the other readings. We believe this was due to reverberation between the buildings.

This test was conducted by Layne Ashby of Action Target with assistance from Skyler Wallin of Get Some Guns.

SAFETY BAFFLES

Action Target has designed an innovative combination of steel, wood, and acoustical tile to create our safety baffles—one of the most critical safety concerns in any indoor range. These safety baffles ensure errant bullets can't escape to the outside, providing ballistic protection to lights, pipes, ventilation ducts, and other structures, while also delivering sound abatement, and a polished, professional appearance to the range.

RANGE SECURITY

Action Target Security Powered by Fedora integrates cutting-edge camera technology, security equipment, highly trained security professionals, advanced monitoring centers, and intuitive user access management tools to provide the industry's best security solution.

1. PERIMETER PROTECTION

HD cameras with advanced video analytics provide the most reliable protection for your range. These systems are able to recognize a number of perimeter breaches including entering/exiting, object removal/abandonment, loitering, and system compromises. This is overseen at Fedora's Fusion Monitoring Center.

2. ACCESS CONTROL

Secure each room or door with key card, biometric, or passcode access systems and manage user access through an easy-to-use cloud-based network.

3. TWO-WAY AUDIO

A perimeter solution that provides a full duplex audio system, giving the monitoring operator the ability to communicate with and warn a threat while calling law enforcement. This prevents break-ins and property damage from occurring in the first place.

4. INTERNAL SECURITY

Full 1080p HD cameras and alarms strategically placed throughout the facility reduce internal theft and burglary.

5. NETWORK VIDEO RECORDING

Network video recording systems provide 24-hour recording with 40+ days of storage capability. A video monitoring system allows the range to monitor its activity and is compatible with PC and mobile devices (iOS and Android).

6. IN-LANE MONITORING

Full 1080P HD cameras in each lane allow visibility for the range safety officers, range owner, and front desk.

Thank you Barrie Council
for your time and consideration.
