### **EVALUATION OF SANITARY SERVICING FOR CURRENTLY UNSERVICED AREAS**

That the following sanitary servicing strategy be utilized for currently unserved areas through the capital planning process:

- a) That the timing of the sanitary sewer servicing maximize the useful life of the septic systems while minimizing the number of septic system replacements that are required; and
- b) That the condition of all other infrastructure in the right-of-way be considered in the recommended timing of sanitary sewer servicing, in order to maximize the investment in existing infrastructure.
